

EXPERT SYSTEMS ENGINEERING TRAINING DELIVERED LIVE ONLINE DIRECT TO YOUR HOME OR OFFICE.

All of PPI's training is now available via PPI Live-Online™ and delivered to match local time zones worldwide. You can be confident that online training delivered by PPI will be very effective. Delegate ratings for our PPI Live-Online™ delivered training are consistently 9s and 10s.

Two-way video between training leader and learner is important. The PPI training leader uses facial expressions and other body language as cues to engage with the learner in a variety of ways. The posture of the learner, in taking notes or in reading, controls pauses for any note-taking, and of course, discussion is a normal mode.

In fact, the two most effective training delivery modes are physical delivery, and online delivery in which each learner has a dedicated screen and flexible video/audio connection with the training leader and with other delegates.

FULL COURSE SCHEDULE

Systems Engineering 5-Day

This Systems Engineering for Technology-Based Projects and Product Developments course is intended for anybody who will perform or manage significant engineering roles, whether or not under the name “systems engineering”. This course is ideal for formal systems engineering training in that it leads the participant through the ways of thinking and acting that is systems engineering. [Read more...](#)

Requirements Analysis and Specification Writing 5-Day

The Requirements Analysis module addresses the techniques used to capture, validate and gain a complete understanding of requirements communicated at all stages of the system life cycle. The two-day Specification Writing module addresses in detail the conversion of individual requirements into effective requirements specifications. The course focuses on the structure and language of requirements specification. [Read more...](#)

Systems Engineering Management 5-Day

This Systems Engineering Management training course provides in-depth coverage of how to manage engineering projects to maximize project success, within the project's given constraints. The course establishes sound principles and provides effective methods to successfully manage projects, and for getting the best out of people, individually and in teams. [Read more...](#)

Requirements, OCD & CONOPS in Military Capability Development 5-Day

This course is a five-day immersion in the development of military capability, with a focus on problem definition, Operational Concept Description (OCD – how the capability, and each element of its solution, will be used), and concept of operations (CONOPS – how the capability outcome is to be achieved), and specification of technology items and related services that will form a part of the capability solution. Architectural Design 5-Day

This course addresses the principles and methods of designing, regardless of what is being designed. The course provides an integrated approach to the set of technical design process disciplines. These combine with technology knowledge to contribute to the satisfaction of requirements and optimization of system effectiveness, enhancing project success and reducing risk to the enterprise. Medical Device Risk Management 5 Half Days

Medical Devices Risk Management (MDRM) is a progressively more prominent topic in the medical device industry. Expectations by Regulatory bodies of medical device companies in producing quality, logical and defensible risk management files is rising. It is incumbent on the medical device manufacturers to convince the regulatory bodies that the benefits of a medical device outweigh its risks. Convincing the regulatory bodies is especially difficult for complex medical devices. [Read more...](#)
